

## Features

- Low cost, accurate high-side current sensing
- Output voltage scaling
- Up to 2.5V sense voltage
- 2.5V to 20V supply range
- 4 $\mu$ A quiescent current
- 1% typical accuracy

## General Description

The HM6110 is a high side current sense monitor. Using this device eliminates the need to disrupt the ground plane when sensing a load current.

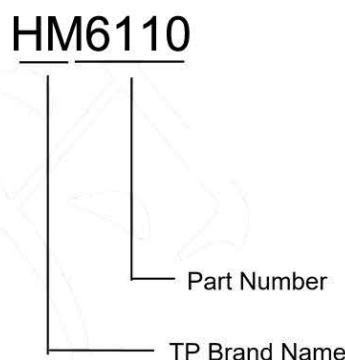

It takes a high side voltage developed across a current shunt resistor and translates it into a proportional output current. A user defined output resistor scales the output current into a ground-referenced voltage.

## Applications

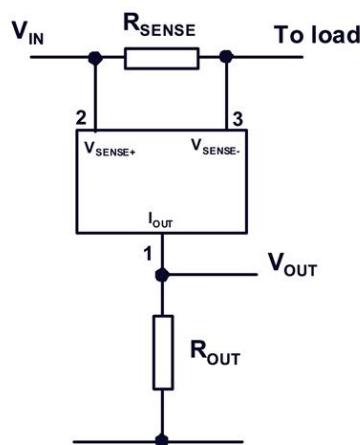

- Battery chargers
- Smart battery packs
- DC motor control
- Over current monitor
- Power management
- Level translating
- Programmable current source

The wide input voltage range of 20V down to as low as 2.5V make it suitable for a range of applications. A minimum operating current of just 4 $\mu$ A, combined with a SOT23 package make it a unique solution for portable battery equipment.
